

WOLVERINE

(BPC-157 AND TB 500)

WHAT IS IT?

Wolverine is a regenerative peptide protocol commonly used to support the body's natural repair process. This therapy is used in regenerative and functional medicine to support healing at the cellular level.

BENEFITS

- Accelerated recovery from injury or strain
- Support for muscles, tendons and ligaments
- Improved mobility and tissue repair
- Enhanced post-procedure healing
- Support for overall regenerative function

WHO IT'S FOR

- Those who are recovering from musculoskeletal injury or overuse
- Experience chronic inflammation or joint discomfort
- Want faster healing and recovery
- Active individuals seeking improved tissue resilience

TIMELINE

Weeks 1-2

- Subtle reduction in inflammation

Weeks 3-6

- Improved mobility and tissue repair
- decreased soreness and faster recovery

Weeks 6-12+

- Enhances structural healing support
- Greater resilience in previously stressed areas

HOW IT IS USED

- Subcutaneous injections into abdomen or thigh
- Cycle of injections 5 days on and 2 days off

MAXIMIZE YOUR RESULTS

- Follow your treatment protocol consistently
- support recovery with hydration and adequate protein intake
- Avoid overtraining during early healing phases
- Pair with complementary therapies when recommended
- Prioritize rest and sleep for tissue repair

ARE THERE ANY SIDE EFFECTS?

Generally well tolerated. Possible mild side effects include:

- Temporary redness or irritation at injection site
- Mild fatigue or flu-like feeling in rare cases
- localized tenderness or swelling

*while extremely rare serious allergic reactions are possible. If experiencing difficulty breathing, swelling of face or throat, severe rash or persistent dizziness seek immediate medical attention

WHO SHOULD AVOID THIS THERAPY?

- Those who are pregnant, breastfeeding or thinking about becoming pregnant
- Have active cancer or uncontrolled medical conditions
- Have an active infection
- Are taking medications that affect healing or immune response

Disclosure: peptide therapy, including BPC-157 and TB 500 are considered part of integrative and regenerative medicine. Certain uses may be off-label, meaning they are not specifically approved for all indications by the FDA.
